

## **FOR IMMEDIATE RELEASE**

### **AdvancedIO® Systems Announces V8200 Development Platform for High Bandwidth Applications**

#### **Advanced middleware accelerates deployment of DPI functionality to address evolving network monitoring requirements**

**Vancouver, Canada, Apr 12, 2010** — AdvancedIO® Systems, leading provider of programmable network security, monitoring, and sensor solutions, today announced the immediate availability of the V8200 Development Platform, the industry's first fully integrated development system purpose built for high-bandwidth applications. The V8200 is a ready-to-go, highly programmable, compact desktop system that helps OEMs get new products and services to market faster. Application developers can immediately use the V8200 to rapidly prototype line-rate monitoring applications for 10 Gigabit Ethernet networks. Development is significantly accelerated by AdvancedIO's expressXG™ Framework software, a unique middleware that abstracts deep packet inspection (DPI) functionality to dramatically cut development time while facilitating the portability of applications.

"AdvancedIO understands that customers need to rapidly prototype, test, and deploy applications to meet increasingly complex high-bandwidth network monitoring requirements," said Rob Kraft, VP of Marketing at AdvancedIO. "Our unique middleware technology introduces a new paradigm for high bandwidth DPI systems that is key to rapid application development. The V8200 Development Platform enables developers to start realizing the benefits of this technology to solve their problems as quickly as possible."

The V8200 is a compact MicroTCA® platform consisting of an Intel® Core™ 2 Duo system controller running Linux Fedora Core 11 and the expressXG Framework software, a high-performance XAUI data switch, and two 10 Gigabit Ethernet FPGA processing line cards. The platform comes complete with optical transceivers and cables. For more details, see <http://www.advancedio.com/v8200>.

The V8200 is available now. For more information or for a product demonstration, please contact: 1.877.331.7775 x215 or [sales@advancedio.com](mailto:sales@advancedio.com).

### **About AdvancedIO Systems**

AdvancedIO Systems provides programmable network security, monitoring, and sensor solutions optimized for decision-critical applications. When the integrity of complex communications infrastructure is on the line, monitoring, detection and action are only as successful as a system's ability to respond in real time. That's why top organizations trust AdvancedIO to optimize their systems and provide them competitive advantage. With a flexible, customer-focused approach and an unparalleled team of systems experts, AdvancedIO is the only choice for programmable, high performance network security, monitoring and sensor solutions. For more information, please visit [www.advancedio.com](http://www.advancedio.com).
